The Platinum Investment Bond ("Bond") is an investment bond issued by Lifeplan Australia Friendly Society Limited ABN 78 087 649 492 AFSL 237989. Platinum Investment Management Limited ABN 25 063 565 006 AFSL 221935 ("Platinum"), is the responsible entity of the Platinum Asia Fund ("PAF"), an underlying investment option of the Bond. The Bond's latest Product Disclosure Statement ("PDS") provides details about the Bond. You can obtain a copy of the PDS from Australian Unity's website www.australianunity.com.au/platinum, or by contacting their Investor Services on 1800 670 638. This information is general in nature and does not take into account your specific needs or circumstances. You should consider your own financial position, objectives and requirements and seek professional financial advice before making any financial decisions. Numerical figures are subject to rounding. Platinum does not guarantee the performance of the Bond or PAF, the repayment of capital or the payment of income. The market commentary reflects Platinum's views and beliefs at the time of preparation, which are subject to change without notice. No representations or warranties are made by Platinum as to their accuracy or reliability. To the extent permitted by law, no liability is accepted by Platinum for any loss or damage as a result of any reliance on this information.

1. & 2. Source: Platinum for PAF returns and Factset Research Systems for MSCI returns. Investment returns are calculated using PAF's NAV unit price (i.e. exclude a buy/sell spread), and represent the combined income and capital returns in the specified period. All returns are pre-tax, net of fees and costs and assume the reinvestment of distributions. The returns are calculated relative to the MSCI All Country Asia ex-Japan Net Index in A\$. The investment returns depicted in the graph are cumulative on A\$20,000 invested in PAF since inception (04 March 2003). **Past performance is not a reliable indicator of future returns.** Platinum does not invest by reference to the weightings of the index. The index is provided as a reference only.

3. The "Long %" is PAF's exposure to long securities and long securities/index derivative positions, the "Short %" is PAF's exposure to short securities and short securities/index derivative positions and the "Net %" is the difference between the "Long %" and the "Short %", each as a percentage of the market value of PAF's portfolio. The "Currency %" is the effective currency exposure of PAF's portfolio as a percentage of the market value of its portfolio, taking into account long and short securities, cash, forwards and long and short securities/index derivative positions. For the "Industry breakdown", index positions (whether through ETFs or derivatives) are only included under the relevant sector if they are sector specific, otherwise they are included under "Other".

3. and 4. Country classifications for securities reflect Bloomberg's "country of risk" designations, and currency classifications for securities reflect the relevant local currencies of our country classifications.

4. The "Top ten positions" show PAF's top ten long securities positions as a percentage of the market value of PAF's portfolio (including long securities and long securities derivative positions).

All data where MSCI is referenced is the property of MSCI Limited ("MSCI"). No use or distribution of this data is permitted without the written consent of MSCI. This data is provided "as is" without any warranties by MSCI.

MSCI assumes no liability for or in connection with this data. Please see full MSCI disclaimer in <https://www.platinum.com.au/Special-Pages/Terms-Conditions>

This commentary relates to the underlying fund, the Platinum Asia Fund.

- Chinese economy weak, but equity markets calm.
- We have bought back into Tencent and Alibaba.
- Samsung's excellent results and sell off are instructive.

Asian markets and the Fund were negative in October, with all of the region's key markets of China, Taiwan, Korea and India down in Australian dollar terms. Key detractors from the Fund for the month were largely in China, with our Chinese property and consumer discretionary holdings, such as China Resources Land and Anta Sports, lagging. Samsung Electronics was also weak as investors continue to shun semiconductor stocks for fear of memory prices falling from current high levels. However, we see ongoing capital discipline in a consolidated industry as continuing to make semiconductor companies very attractive holdings. Alibaba, which we have been buying in recent weeks, was our largest positive contributor in October. Our Indian stocks also did well and battery input and chemicals company LG Chem bounced back from a weak month in September to contribute strongly.

Chinese economy weak, but market reaction muted

Investors have been saturated with stories of crisis in China, but our view is more prosaic – stocks are somewhat weak in the midst of an economic slowdown and reform program in China, but China and non-Japan Asia more broadly continue to present long-term growth potential, attractive valuations and some very fine businesses. For more information please see The Journal section of our website (<https://www.platinum.com.au/Insights-Tools/The-Journal>).

The Chinese economy has clearly slowed and may be in its first technical recession of modern history (Source: Wigram Capital Advisers). However, despite all the calamitous headlines, China's equity markets have shown a muted response, due in our view, to the low valuations and investor neglect already evident in that market. As a reminder – China's equity market was the world's most expensive in 2007 and is now among its cheapest (Source: Credit Suisse). As a result, we think it is understandable that China's equity markets are basically flat for the year and up more than 60% over three years (please see accompanying chart). Further, data released during October show profits of industrial enterprises in September grew 16.3% year-on-year and at a two-year compound annual rate of 13.2% in China (Source: CICC).

Buying back into China's tech giants

Ongoing regulatory pressure has seen China's internet giants Tencent and Alibaba sell off heavily in recent months. These were among the Fund's biggest holdings until late 2020, when we sold due to heavy investor crowding and clear signals of the regulatory risk that was building, as we recorded in our November 2020 Monthly Update. We have used the current sell off to renew sizeable positions in these still-outstanding businesses. Regulatory risk is a fact of life for dominant platform businesses globally – recall the travails of Facebook and Google. This likely robs some of the dynamism and earnings power from such businesses. However, what remains are regulated social utilities, which can still grow earnings solidly, have enormous returns on capital and market power.

Samsung Electronics reports a strong Q3 and the stock sells off

Samsung Electronics reported its third-quarter earnings during October. Its memory business's earnings were up 46% year-on-year and 16% higher than the prior quarter, assisted by growth in volume and increases in average selling price (Source: Company filings). Management noted again that the amplitude of memory cycles is shallower and shorter in duration than in past decades. Capital expenditures remain muted in response to extraordinary pricing – which is central to our thesis that the semiconductor industry has genuinely changed and displays oligopolistic traits. The fact that the stock sold off and was one of our key performance detractors for the month is instructive more broadly. It is an example of equity markets' ongoing, stubborn refusal to price high rates of nominal global growth. We own shares in businesses and we think like owners. We expect to be rewarded for holding high-quality industrial businesses, which can grow earnings, have good balance sheets and market positions. At present, such firms are out of favour with investors, but either markets will price such businesses appropriately, or they will be acquired or reward shareholders with dividends and buybacks.
