The Platinum Investment Bond ("Bond") is an investment bond issued by Lifeplan Australia Friendly Society Limited ABN 78 087 649 492 AFSL 237989. Platinum Investment Management Limited ABN 25 063 565 006 AFSL 221935 ("Platinum"), is the responsible entity of the Platinum Asia Fund ("PAF"), an underlying investment option of the Bond. The Bond's latest Product Disclosure Statement ("PDS") provides details about the Bond. You can obtain a copy of the PDS from Australian Unity's website www.australianunity.com.au/platinum, or by contacting their Investor Services on 1800 670 638. This information is general in nature and does not take into account your specific needs or circumstances. You should consider your own financial position, objectives and requirements and seek professional financial advice before making any financial decisions. Numerical figures are subject to rounding. Platinum does not guarantee the performance of the Bond or PAF, the repayment of capital or the payment of income. The market commentary reflects Platinum's views and beliefs at the time of preparation, which are subject to change without notice. No representations or warranties are made by Platinum as to their accuracy or reliability. To the extent permitted by law, no liability is accepted by Platinum for any loss or damage as a result of any reliance on this information.

1. & 2. Source: Platinum for PAF returns and Factset Research Systems for MSCI returns. Investment returns are calculated using PAF's NAV unit price (i.e. exclude a buy/sell spread), and represent the combined income and capital returns in the specified period. All returns are pre-tax, net of fees and costs and assume the reinvestment of distributions. The returns are calculated relative to the MSCI All Country Asia ex-Japan Net Index in A\$. The investment returns depicted in the graph are cumulative on A\$20,000 invested in PAF since inception (04 March 2003). **Past performance is not a reliable indicator of future returns.** Platinum does not invest by reference to the weightings of the index. The index is provided as a reference only.

3. The "Long %" is PAF's exposure to long securities and long securities/index derivative positions, the "Short %" is PAF's exposure to short securities and short securities/index derivative positions and the "Net %" is the difference between the "Long %" and the "Short %", each as a percentage of the market value of PAF's portfolio. The "Currency %" is the effective currency exposure of PAF's portfolio as a percentage of the market value of its portfolio, taking into account long and short securities, cash, forwards and long and short securities/index derivative positions. For the "Industry breakdown", index positions (whether through ETFs or derivatives) are only included under the relevant sector if they are sector specific, otherwise they are included under "Other".

3. and 4. Country classifications for securities reflect Bloomberg's "country of risk" designations, and currency classifications for securities reflect the relevant local currencies of our country classifications.

4. The "Top ten positions" show PAF's top ten long securities positions as a percentage of the market value of PAF's portfolio (including long securities and long securities derivative positions).

All data where MSCI is referenced is the property of MSCI Limited ("MSCI"). No use or distribution of this data is permitted without the written consent of MSCI. This data is provided "as is" without any warranties by MSCI.

MSCI assumes no liability for or in connection with this data. Please see full MSCI disclaimer in <https://www.platinum.com.au/Special-Pages/Terms-Conditions>

This commentary relates to the underlying fund, the Platinum Asia Fund.

- Non-Japan Asian equity market returns lagged global markets in 2021.
- The sell-off in Chinese tech firms is a great opportunity.
- The case for Asia is strong in the current bubble environment.

At the conclusion of a strong year for global benchmarks, Asia has been a laggard, with broad indices such as the MSCI Non-Japan Asia Index basically flat and the Fund slightly negative.

Reiterating the case for China

With that backdrop, it is worth reiterating the investment case for China, which dominates our holdings in the region. Here, we see an equity market that is the polar opposite of the US market, which we view as crowded and very expensive. In 2007, the Chinese equity market was the most expensive major market in the world on a price-to earnings (PE) basis, at 27x forward earnings (Source: Credit Suisse, using the MSCI AC China Index). The Shanghai Composite Index was on the verge of falling 67.5% in a matter of months, and it remains approximately 40% lower than its 2007 peak 14 years later (Source: FactSet). The MSCI AC China Index has de-rated to 11x earnings at the time of writing in early January 2022 (Source: Credit Suisse). The time to be fearful of Chinese equities was when they were in an enthusiastic bubble – in 2007!

Renewed holdings in China's tech giants

Ongoing regulatory pressure saw China's internet giants Tencent and Alibaba sell off heavily in 2021. These were among our biggest holdings until late 2020, when we sold due to investor crowding and clear signals of the regulatory risk that was building. We have used the sell-off in late 2021 to renew sizeable positions in these still-outstanding businesses at attractive valuations. Regulatory risk is omnipresent for dominant tech businesses in every jurisdiction. The example of Facebook in recent years provides a parallel – heightened investor anxiety regarding regulation and scandal provided excellent buying opportunities. We see a bright future for China's internet giants – they will need to tow the party line and observe more rigorously enforced regulation, but we think these will be far larger and still highly profitable businesses in five years' time. Consider that during December the Chinese National Bureau of Statistics reported that Chinese online retail sales grew at 3.2% in November off a high base and at a two-year, pre-COVID compound annual rate of 10.6% (Source: CLSA). These numbers are weak by Chinese standards without question, but do note the strength of businesses whose market grows at over 10% in times of weakness.

Potential returns and safety amid the unloved stocks of Asia

The global economy is booming amid a capex surge, reopening in fits and starts and with significant fiscal support for major economies being monetised by central banks. This is the type of environment that generally sees the "emerging market" trade work well – recall that China was the most expensive equity market globally amid the global growth boom of the 2000s. There is every chance that market leadership may shift in coming years should growth conditions remain buoyant and we are confident that our portfolio of high-quality, relatively cyclical businesses would perform well in such an environment. Note also – the industrial economies of Asia, such as South Korea and China, are expected to see robust earnings growth in the year ahead, and are among the world's cheapest equity markets (see accompanying charts).

On the other hand, we are acutely focused on capital preservation in current markets – to be clear, we are of the view that equity markets are spectacularly frothy and a significant correction is likely in coming months or years. In this environment we see enormous value in holding unloved, cheap businesses in regions like Asia, which diversify investor returns. This worked well in the post-2000 world may well do so again.

In our view, now is exactly the type of environment that the diversity of returns, undemanding valuation and light ownership of Asian markets in general and China in particular are of greatest potential value.
