The Platinum Investment Bond ("Bond") is an investment bond issued by Lifeplan Australia Friendly Society Limited ABN 78 087 649 492 AFSL 237989. Platinum Investment Management Limited ABN 25 063 565 006 AFSL 221935 ("Platinum"), is the responsible entity of the Platinum International Fund ("PIF"), an underlying investment option of the Bond. The Bond's latest Product Disclosure Statement ("PDS") provides details about the Bond. You can obtain a copy of the PDS from Australian Unity's website www.australianunity.com.au/platinum, or by contacting their Investor Services on 1800 670 638. This information is general in nature and does not take into account your specific needs or circumstances. You should consider your own financial position, objectives and requirements and seek professional financial advice before making any financial decisions. Numerical figures are subject to rounding. Platinum does not guarantee the performance of the Bond or PIF, the repayment of capital or the payment of income. The market commentary reflects Platinum's views and beliefs at the time of preparation, which are subject to change without notice. No representations or warranties are made by Platinum as to their accuracy or reliability. To the extent permitted by law, no liability is accepted by Platinum for any loss or damage as a result of any reliance on this information.

1. & 2. Source: Platinum for PIF returns and Factset Research Systems for MSCI returns. Investment returns are calculated using PIF's NAV unit price (i.e. exclude a buy/sell spread), and represent the combined income and capital returns in the specified period. All returns are pre-tax, net of fees and costs and assume the reinvestment of distributions. The returns are calculated relative to the MSCI All Country World Net Index in AS\$. The investment returns depicted in the graph are cumulative on A\$20,000 invested in PIF since inception (30 April 1995). **Past performance is not a reliable indicator of future returns.** Platinum does not invest by reference to the weightings of the index. The index is provided as a reference only.

3. The "Long %" is PIF's exposure to long securities and long securities/index derivative positions, the "Short %" is PIF's exposure to short securities and short securities/index derivative positions and the "Net %" is the difference between the "Long %" and the "Short %", each as a percentage of the market value of PIF's portfolio. The "Currency %" is the effective currency exposure of PIF's portfolio as a percentage of the market value of its portfolio, taking into account long and short securities, cash, forwards and long and short securities/index derivative positions. For the "Industry breakdown", index positions (whether through ETFs or derivatives) are only included under the relevant sector if they are sector specific, otherwise they are included under "Other".

3. and 4. Country classifications for securities reflect Bloomberg's "country of risk" designations, and currency classifications for securities reflect the relevant local currencies of our country classifications.

4. The "Top ten positions" show PIF's top ten long securities positions as a percentage of the market value of PIF's portfolio (including long securities and long securities derivative positions).

All data where MSCI is referenced is the property of MSCI Limited ("MSCI"). No use or distribution of this data is permitted without the written consent of MSCI. This data is provided "as is" without any warranties by MSCI.

MSCI assumes no liability for or in connection with this data. Please see full MSCI disclaimer in <https://www.platinum.com.au/Special-Pages/Terms-Conditions>

MARKET UPDATE AND COMMENTARY

This commentary relates to the underlying fund, the Platinum International Fund

- Strong April means that 6-month returns are positive against a falling market backdrop.
- Portfolio positioning near its most conservative in our 28-year history.
- Likely we are only part-way through the technology sell-off based on historical patterns.

Market Commentary

The Fund had a strong April, returning 4% (after fees and costs), which is especially pleasing given the very weak market backdrop, with the technology-heavy Nasdaq index extending its 2022 losses to over 20%.

It was no surprise to see bond yields rise rapidly and more heat come out of the speculative mania. The surprise to us though, is how long it has taken, having expressed concerns over a bifurcated market, wild speculation and the risks of inflation for some time.

Taking an alternate view to the crowd is uncomfortable. We strive to protect our investors' portfolios from permanent impairment of capital, but in a rampant bull market, staying the course can be challenging.

In December, we showed the expensive valuations ascribed to the 'big six' largest companies Apple, Amazon, Microsoft, Alphabet (Google parent), Tesla and Meta Platforms (formerly known as Facebook). By 30 April 2022, each was 14-48% below their respective 52-week highs (average 28%), with Netflix down 70%, yet on a simple earnings yield (see second table below) they are now more expensive relative to 'risk free' US Treasuries than before, reducing their investment appeal (Source: FactSet).

With an understanding from history that when bull markets end, markets tend to give back 50-85% of the preceding rise, we have one of the most cautious portfolio positionings in our history.

We remain excited by opportunities across decarbonisation, semiconductors, travel, Chinese consumers, and growth industrials. On the short side, we have sought to protect the portfolio with a range of positions on stocks that have alarming fundamentals and/or valuations, many of which are in the technology and consumer areas.

Performance Analysis*

The last six months is a good reminder of why we do what we do. As markets sold off by 7%, we delivered a positive return. This was due to our short positions adding over 6% to returns. This more than offset any falls on the long side in challenging markets. That return from the short positions arose from an average weighting of only 23% of our assets, implying that companies we were short fell on average by more than 25% over the six-month period to 30 April. On the long side, three stand out contributors were China Overseas Land & Investment (Property) and materials companies Glencore and Mosaic (US fertiliser company).

Valuation

The portfolio's aggregate valuation metrics are attractive in both an absolute sense and relative to the market, with a 51% higher starting earnings yield and a 40% discount on an asset basis (see table below).

Metric	Platinum International Fund	MSCI AC World Net Index (A\$)
NTM Earnings Yield	9.8% (Price-to-Earnings ratio of 10.2x)	6.5% (Price-to-Earnings ratio of 15.4x)
NTM Dividend Yield	3.2%	2.7%
Price-to-Book Ratio	1.5x	2.5x
Enterprise Value-to-Sales	1.4x	1.8x

The valuations in the table have been calculated by Platinum and for the Fund refer to the long portion of the portfolio, exclude negative net earnings and use FactSet consensus earnings. As at 30 April 2022. NTM = next twelve months.

In December, we compared the long portfolio with global markets, the 'big six' listed above, and US 10-year bond yields. Increasing yields mean more attractive valuations all round, but the rate of change is informative. The portfolio yield has risen the most, which is encouraging, followed by bonds, meaning that broad global markets and particularly the 'big six' have become relatively dearer.

Asset	NTM Earnings Yield (31-12-2021)	NTM Earnings Yield (30-4-2022)	Increase in NTM Earnings Yield
Platinum International Fund (Longs)	7.8%	9.8%	+2.0%
MSCI AC World Net Index (A\$)	5.5%	6.5%	+1.0%
'Big six' stocks	2.8%	3.6%	+0.8%
US 10-year Treasury	1.5%	2.9%	+1.4%

Source: The valuations in the table have been calculated by Platinum and for the Fund refer to the long portion of the portfolio, exclude negative net earnings and use FactSet consensus earnings. As at 30 April 2022.

*Source: Platinum. Contribution numbers are based on the total return of individual positions (in AUD) and are gross as they do not take into account the Fund's fees and costs (other than brokerage). **Past performance is not a reliable indicator of future returns.**
